

# **DESIGNED FOR PUBLIC SAFETY APPLICATIONS**

Futurecom Vehicular Repeaters have been successfully deployed and in use by numerous Police and Fire Departments across the US and Canada for more then 15 years. The last generation of Digital Vehicular Repeaters offers seamless performance by extending voice communications as well as trunking system features to the portable radio users.

## **PORTABLE RADIO COVERAGE EXTENDER**

Digital Vehicular Repeater Systems (DVRS) are used to provide reliable portable radio communications in areas where portable radio users have marginal to none direct access to the Radio System.

## **ENCLOSURE OPTIONS**

Two enclosure types are available - Indoor wall mount and Outdoor wall or pole mount.

## **COMPATIBILITY**

The Fixed mount DVRS is a self contained, fully integrated package and easy to deploy in the field. The Vehicular Repeater, Mobile radio, power supply, battery backup, filtering and accessories are mounted inside the Fixed mount enclosure.

The DVRS is compatible with remote mount XTL™2500 (M5 Control Head) or remote mount XTL™5000 (O3 or O5 Control Head).

### **ANTENNAS**

The DVRS requires two antennas – one for communications with the System and another for provision of local portable radio coverage.

#### **POWER UP OPTIONS**

The Fixed mount DVRS is powered by connecting to standard 117 V AC power outlet and includes a built-in battery backup. If required, the unit can be configured for 230 V AC operation.

## **FIXED MOUNT DVRS APPLICATIONS**

The Fixed Mount DVRS can be used instead of a Bi-Directional Amplifier (BDA) for inbuilding radio coverage extension or as a Site extender in remote rural areas. The DVRS has many advantages compared to other types of fixed radio coverage extenders.

## **TECHNICAL HIGHLIGHTS**

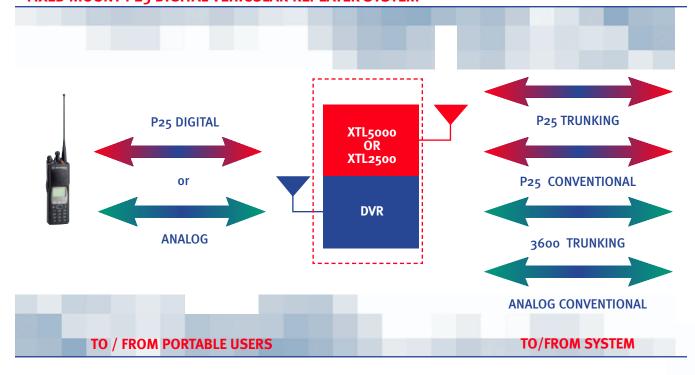

• Available in VHF / UHF / 700 / 800MHz bands (25 or 12.5kHz).

Note: At least one extra frequency pair must be licensed and dedicated to DVRS use only (frequency plan restrictions apply)!

- In-band or Cross-Band models available.
- Programmable Analog or P25 Digital operation.
- P25 Digital Conventional DVR mode can be used to extend coverage from P25 Trunking or P25 Conventional Systems.
- Analog Conventional DVR mode can be used to extend coverage from P25 9600 or 3600 Trunking, or Conventional (Analog or P25) System.
- Full Duplex or Simplex mode support.
- Controlled from the integrated Mobile Radio Control Head.
- Tactical model (single channel conventional repeater without Mobile Radio) available.
- Fully synthesized and field programmable via USB interface.
- 64 Channels capable.
- Field Flash upgradeable.
- Programmable output power 1-10 Watts at Antenna port.
