# DVU-2

[Analog to Digital Migration Tool]

DVU-2 is an analog gateway to MOTOTRBO™ Connect Plus Talk Groups. Each unit has one Ethernet port for connectivity to the XRT 9000. Interface any analog device via 2-wire or 4-wire with this unit. Stack up to 15 DVU-2s per XRT 9000. The DVU-2 is a hardware solution that provides voice compatibility between legacy analog systems or telephone networks to MOTOTRBO™ Connect Plus talk groups.

## Interfaces

- Two-way Radios
- 4-wire Consoles, Repeaters, PBXs
- IP Interface to XRT 9000
- 2-wire Devices

Alternatively, this device serves as a talk group patch between two MOTOTRBO™ Connect Plus systems via IP. Connect your system to another talk group on another system.
