AUTOMATING BOOKING AND DETENTION OPERATIONS

PREMIERONE JAIL

Jail management is one of the most difficult, dangerous and underfunded jobs in public safety. Taxpayers want to spend as little as possible on corrections, but in economically challenging times small budgets are getting smaller at the same time that inmate populations are getting larger. With ongoing pressure to do more with less, police and sheriff departments are continually challenged to increase the operational efficiency of their facilities.

PremierOne™ Jail reduces complexity and makes the booking and detention process as fast and as easy as possible. Part of the PremierOne suite of public safety applications, PremierOne Jail works seamlessly with PremierOne Records, increasing information sharing and automating many of the booking and administrative tasks of your detention facility. From arrest to release, PremierOne Jail helps you ensure due process and realize new levels of efficiency throughout your operations.

LOCK IN REDUCED COMPLEXITY AND INCREASED EFFICIENCY

PremierOne™ Jail is a powerful tool designed to help solve the most critical issues in jail management today by streamlining workflows, improving efficiency and enhancing inmate management. Through seamless integration with PremierOne Records, it delivers the information you need to reduce the workload of managing the ever-growing volume and diversity of your inmate population. Whether you manage booking and detention for a single agency, multiple hosted agencies or a regional consortium, PremierOne Jail automates every aspect of inmate tracking and transactions, helping officers and administrators to enhance safety and improve their jail management operations.

SEAMLESS SHARING OF INMATE INFORMATION

To streamline the booking and detention process, you need a seamless data flow that provides the information you need when and where you need it, quickly and easily. Because PremierOne Jail shares master index and other records with PremierOne Records, officers and administrators can enter this information just once and it is immediately available to the entire system. PremierOne Jail ensures the secure sharing of information — such as booking data, classifications and risks, mug shots, gang affiliation, court orders and more — both internally and with other jail and records agencies.

Sophisticated controls let you secure sensitive inmate information to prevent improper disclosure yet provide real-time access to this valuable information for officers on the street and correctional personnel responsible for handling inmates.

EXPEDITED BOOKING PROCESSES

The faster a detainee can be booked, the faster the arresting officer can be back on the street protecting the community. With PremierOne Jail, access to critical data, regardless of the officer's location, allows the booking process to be started in the field and for prisoners to be transferred to jail personnel more quickly. Plus, there's no need to spend time entering the data again in the sally port or station since the central data repository is automatically updated. PremierOne Jail also lets jail personnel quickly process inmates and assign an appropriate housing unit based on agency criteria.
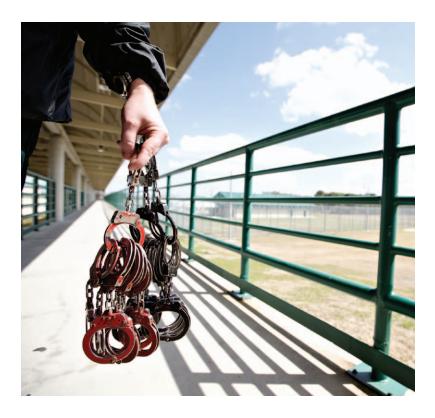

OPTIMIZED INMATE MANAGEMENT

As your facility population grows and your officer-to-inmate ratios shrink, the need for fast and accurate inmate tracking information becomes more critical. PremierOne Jail makes your job easier with inmate management capabilities including:

- Standard classifications and optional Northpointe™ classifications assure accurate inmate assessment

- Authorized users can place holds on inmates, notifying staff of outstanding warrants or other issues that must be adjudicated before release

- Agency-specific release checklists ensure that all court and agency criteria are met, including holds for other agencies

- Query functionality enables state queries for visitor background checks and warrants checks prior to release

- Visitation module tracks visitor requests and logs visitations

- Housing Administration module lets you match your system to facility capabilities and classify housing units by capacity, security level, age and gender

- Gangs and Gang Members modules allow the jail gang unit to appropriately categorize gang members

- Optional property and evidence system tracks inmate property and seized evidence with a full chain of custody

EFFICIENT INMATE MOVEMENTS

Inmate movement is one of the most challenging and dangerous processes in jail management. PremierOne Jail streamlines and simplifies these high-volume transactions to reduce errors and liability. When officers scan an inmate's barcode wristband, a summary screen is displayed, providing an inmate photo, classification alerts and other pertinent information such as age, gender and medical issues. This information lets facilities handle inmates appropriately to help keep officers and inmates safe.

Automated alerts notify officers if they are attempting a move to an inappropriate location, preventing issues such as housing violent offenders with low-risk

inmates or repeat offenders with juveniles. The system also enforces other orders such as keep-separates issued to prevent certain individuals, such as co-defendants or rival gang members, from being housed or moved together. Plus, administrators can create movement schedules ahead of time to ensure accurate transfers, saving sworn officers' time by enabling them to conduct the transaction quickly and efficiently.

VIRTUAL MULTI-MEDIA BOOKING JACKETS

Highly efficient virtual booking jackets update dynamically and organize all inmate information, including multimedia files, in one secure place. Files can be accessed anywhere, anytime, regardless of location, making accurate, consistent information on individuals – from mug shots to medical assessment to agency-generated multimedia files to scanned court documents and more – available to everyone authorized to view it. Plus, advanced security controls prevent unauthorized access or dissemination of the data so you can be confident this information is protected and secure.

PREMIERONE JAIL FEATURES

- Booking
- Accept Inmate
- Classification
- Health Care Screening
- Keep Separates
- Activity Logs
- Inmate Movements
- Temporary Outings
- Court Appearances
- Housing/Bed Management
- Visitation Approvals
- Visitation Logging
- Inmate Holds
- Release Checklists
- Inmate Release

AGENCY CONFIGURABLE

To effectively manage the high volume, critical demands of your daily operations, you need a comprehensive jail management solution that is intuitive, user-friendly and configurable to work the way you do. Through integration with PremierOne™ Records and its innovative Advanced Configuration Tool (ACT), you can configure existing PremierOne Jail modules by adding and modifying fields. You can even create agency-specific modules that integrate seamlessly with the system, and configure workflows to conform to your business processes. This capability gives you the flexibility to order the booking process to match your own intake and movement procedures.

PremierOne Jail also easily integrates with other third-party applications such as commissary, telephone services and others, helping you to control costs and leverage your existing investment. Bottom line, PremierOne Jail allows you to tailor the system to meet your specific needs without the high cost of third party customization.

PURPOSE BUILT

PremierOne Jail is a complete booking and detention solution that takes your operations to new levels of efficiency through its seamless integration and efficient and secure information management and sharing capabilities. Our purpose-built solution provides your staff with the critical information they need to quickly and properly manage inmates while ensuring the safety of all involved. The solution is also flexible in design and user-configurable to work the way you do. PremierOne Jail streamlines your booking and detention processes and reduces complexity, improving your operational efficiency and reducing total cost of ownership.

PUBLIC SAFETY'S ONLY END-TO-END MISSION CRITICAL PORTFOLIO

Only Motorola offers public safety organizations a complete, end-to-end portfolio of technology solutions that include radio and data infrastructure, dispatch consoles, mobile devices and powerful, integrated applications.
