

HOSTED SERVICES THAT SIMPLIFY MOBILE APPLICATION DEVELOPMENT

RhoHub

RhoHub provides hosted services that simplify mobile application development and deployment. With these subscription-based services, you no longer need to buy servers or the devices on which your applications will run. Instead, everything you need is available over the cloud, instantly. Since you're working in the cloud, there are additional benefits. Code is easy to share, enabling remote collaboration with other developers to help resolve issues. And multiple developers can easily work on a single application, helping speed time to market.

RHOCONNECT SERVER HOSTING

With our hosted data synchronization service, it's easier than ever to connect to back end databases. Now, you no longer need to purchase, set up and manage a dedicated RhoConnect server to make your back end data connections. Instead, you can simply purchase a monthly subscription to a hosted virtual RhoConnect server in the cloud.

HOSTED BUILD

With our hosted build service, you can compile any app for any operating system (OS) over the cloud, eliminating the need to purchase equipment to build in the OS native environment, such as a Windows or Apple computer. There is less equipment to purchase and manage, so app development is easier, faster and less expensive.

PRODUCT SPECIFICATION SHEET

RHOHUB — HOSTED SERVICES FOR MOBILE APPLICATIONS

MOBILE APP MANAGEMENT

RhoGallery is a RhoHub service that provides an Enterprise App Store that allows developers and IT to easily manage collections of mobile applications, known as galleries. This mobile application management solution enables developers and IT to upload applications to a gallery and invite users via email or a text message. Users can then simply click on an embedded link to instantly download all the applications in the gallery.

If you upload an updated application, all gallery users are immediately notified that an update is available. In the event a device is stolen, you can wipe the applications and the associated data from a specific device. If a worker is terminated, you can simply revoke the user's invitation and wipe current applications and data. And if the worker is using a device that won't permit the deletion of installed apps, removal of the Launcher App can permanently disable the application and data access.

Reduce application development time, cost and complexity and get to market faster with our family of hosted mobile application services. To find out how, visit www.motorolasolutions.com/RhoHub or access our global contact directory at www.motorolasolutions.com/contactus

RhoMobile Suite — It's always what's next.

RhoMobile Suite; developer-centered, enterprise-focused, future-ready. With countless ways forward, it's always what's next.

RhoMobile Suite is a powerful set of development tools that help businesses mobilize their workers, no matter what technology is in their hands. With RhoMobile Suite, you can develop, integrate, host and manage applications that work across platforms, from iOS to Android to Windows Mobile to systems that don't even exist yet, on both consumer and enterprise devices. RhoMobile Suite includes:

RhoElements: Cross platform development framework for enterprise applications

Rhodes: Cross platform development framework for consumer applications

RhoStudio: One tool simplicity for application development, debugging and testing

RhoConnect: The fastest and easiest integration of backend business data to mobile devices

RhoHub: Hosted services that simplify mobile application development and deployment

RhoGallery: An enterprise app store to deploy, manage and secure mobile apps
